

Project Description:

CALIFORNIA RECYCLING PLANT

Rust Bullet on Concrete Floor

Rust Bullet is also an excellent coating for concrete. It not only creates a moisture barrier that seals concrete from oils, water, chemicals such as battery acid, hydrochloric acid and the more powerful sulfuric acid, but it will actually make your concrete stronger and more wear resistant, adding years to its life.

Because Rust Bullet seals cracks, up to 1/4 inch, nothing will penetrate through the coating making it easy to clean up spills.

Rust Bullet is easy to apply. Just rinse off the dirt and debris, let the surface dry fully and roll on Rust Bullet (two coats).

Because this concrete surface is outside and is wet much of the time, sprinkling sand over the second coat of Rust Bullet provides traction and greatly reduces the dangers of slipping, but still allowing for easy clean up.

This 40 Yard Ten Ton Steel Dumpster is rolled over this concrete twice a week with these abrasive steel wheels, causing a great deal of damage to the unprotected concrete.
